

Advisory Boards for the Advancement of Health

Improving the quality of care and research through effective use of connected health data.

IQVIA is one of the world's leading providers of advanced health insights, technologies and consulting services intended for life sciences. Its excellent reputation is based on its ability to forge partnerships with different stakeholders in the public and private-sectors who share the same objective: continuous improvement of the quality of our healthcare system.

Healthcare-related research is increasingly driven by analyses that draw from real world evidence to reveal the effectiveness of treatments beyond the clinical trial phase. The success of that approach is predicated not only on the availability of the necessary data from various sources within the relevant healthcare system, but on the ability to connect and analyze data across different healthcare systems.

MANDATE OF THE ADVISORY BOARDS FOR THE ADVANCEMENT OF HEALTH (ABAH)

The Advisory Boards serve to foster discussions and connections across multiple stakeholders that enable improved access to and usage of health data, in a responsible and efficient manner, to inform and influence the healthcare community in some of their most challenging issues.

"IQVIA is very proud to bring together experts in their fields to contribute to the dialogue on some of today's most urgent health problems. Our goal is to help advance public health through expanded use of health information and move closer to a more unified approach to improve health care and research."

- Sylvia Durgerian, President, IQVIA Canada

* Each member's mandate is performed on a personal basis and in no way binds the organization that employs that member or which that member represents.

MEMBERS OF THE QUEBEC-BASED ABAH*:

IQVIA representatives:
