

# Transitioning from Intravenous Infusion to Subcutaneous Injection: A Seamless Patient Experience

Discover how IQVIA's flexible patient support services helped rheumatoid arthritis patients transition from intravenous to subcutaneous formulation.

For the best user experience, please open this infographic using Google Chrome or Adobe Acrobat

## Situation

During the COVID-19 pandemic, a large pharmaceutical company wanted to move as many rheumatoid arthritis patients as possible to a different treatment formulation.

## Solution

IQVIA offered a 4-month patient support programme to ensure a smooth transition.

## Results

IQVIA's patient support programme helped rheumatoid arthritis patients transition to a different treatment formulation.

Click the green circles to reveal insights

The project was extended by 3 months.

The **speed** of this project set up improved IQVIA's working relationship with the NHMC.

Type of injection training

Patient referrals by month

Note: A number of patients on the IV formulation were not suitable or did not want to transfer to SC.
